

Koensayr ILH-KK Citadel-class Civilian Cruiser

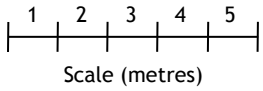

ILH-KK Citadel is meant to fulfill many purposes, and is considered a sturdy vessel. This class of ship does not have escape pods, but the nose, including bridge and passenger module, can be detached from the rest of the ship and used for emergency landings.

All water on board is recycled; furthermore, water is extracted from all other waste in the waste processing plant. The water is then purified, sterilised, and stored for further use. For this reason, it will taste a bit flat, especially nearing the end of a journey.

The ship is designed for use in space, and for docking to a larger ship or space station. It is capable of planetfall, but is ungainly in atmospheric conditions. Docking in space can be conveniently done by the airlocks on either side or the rear cargo bay door.

When the ship lands, a long landing gear extends from the nose, and the tip of the ventral wing is retracted. The hull will nevertheless be an awkward distance from the ground, which makes loading and boarding a challenge. Boarding is mostly done via the ventral airlock, from which a steel cage can be lowered by means of three cables. The cage takes 3-4 people, and is difficult to use in adverse weather conditions. In these cases, Koensayr recommends using an airspeeder and boarding via one of the two docking clamps. Loading is still done via the cargo bay door, but as it will be situated far above ground, and external cargo barge must be used for transport. An early model had a detachable dorsal hatch instead of the rear door; this hatch had repulsorlift capabilities and eliminated the need for a cargo barge. However, it moved slowly and hampered loading more than it helped. Also, it made docking to the cargo bay impossible.

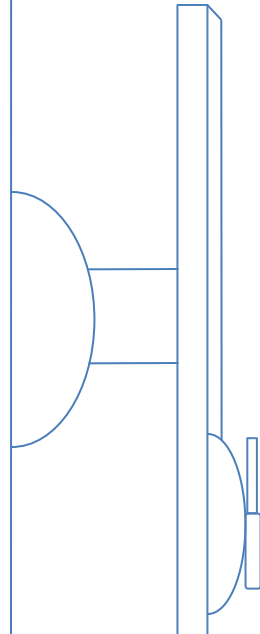

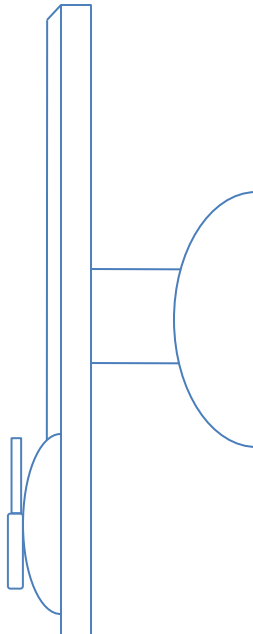

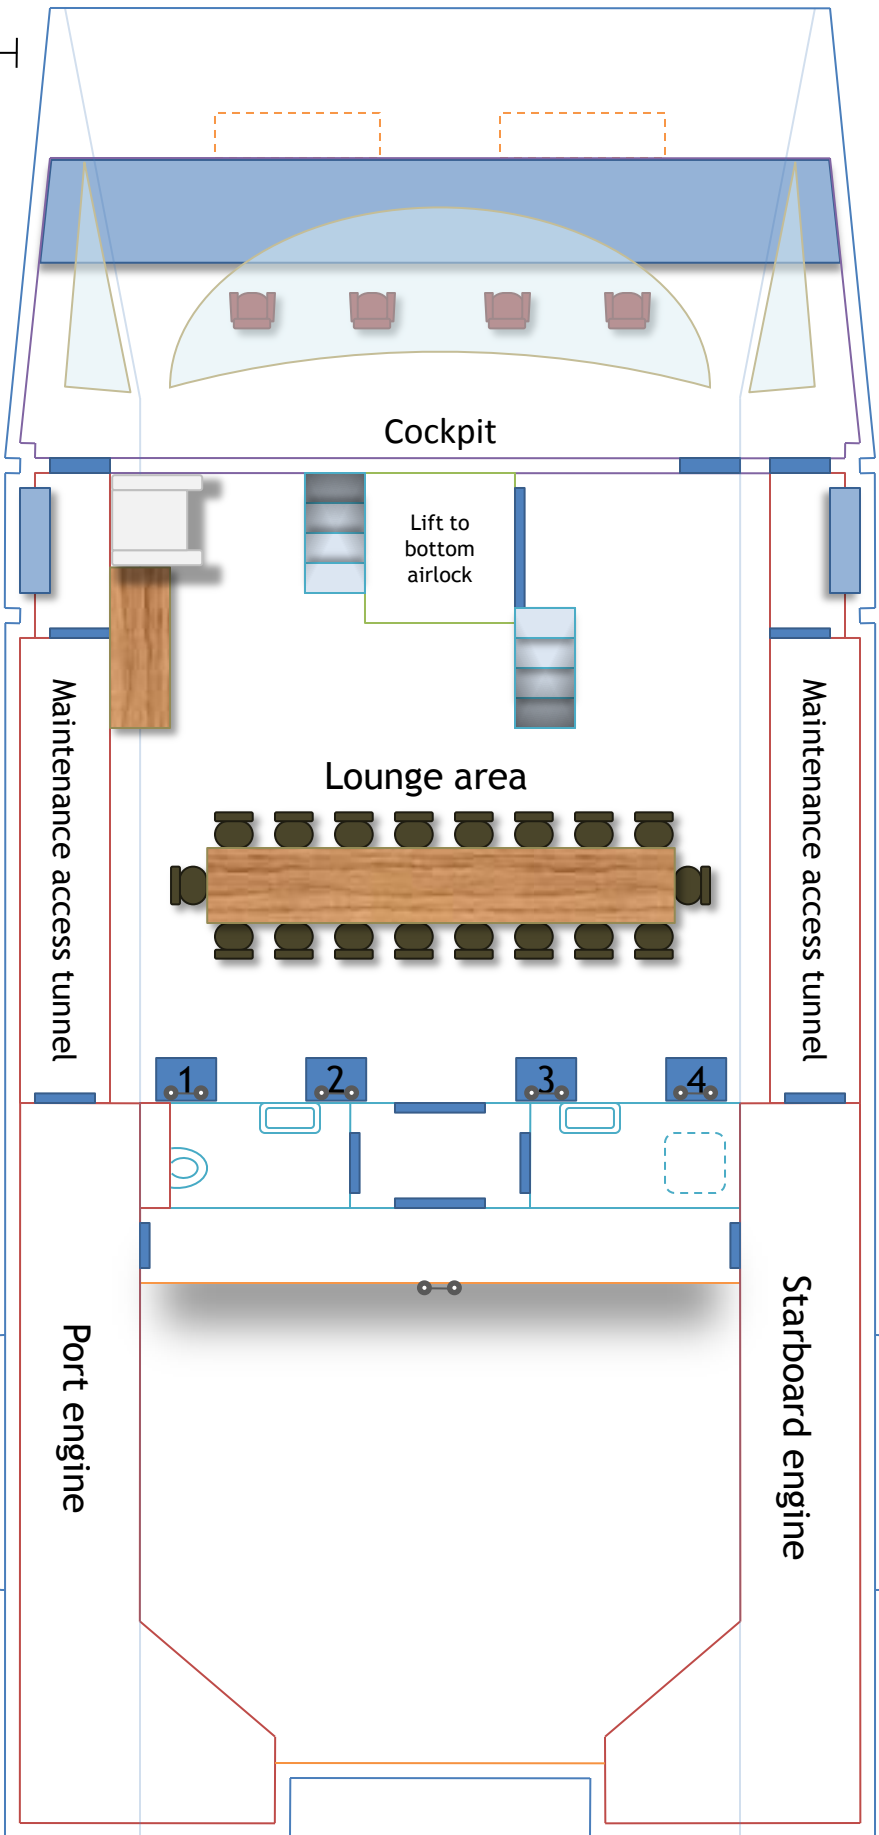

The smuggling compartments are obviously not standard. The compartments indicated on the deck plan is rather convenient spaces where such compartments can, with a bit of work, be installed.

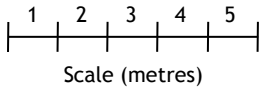

Legend

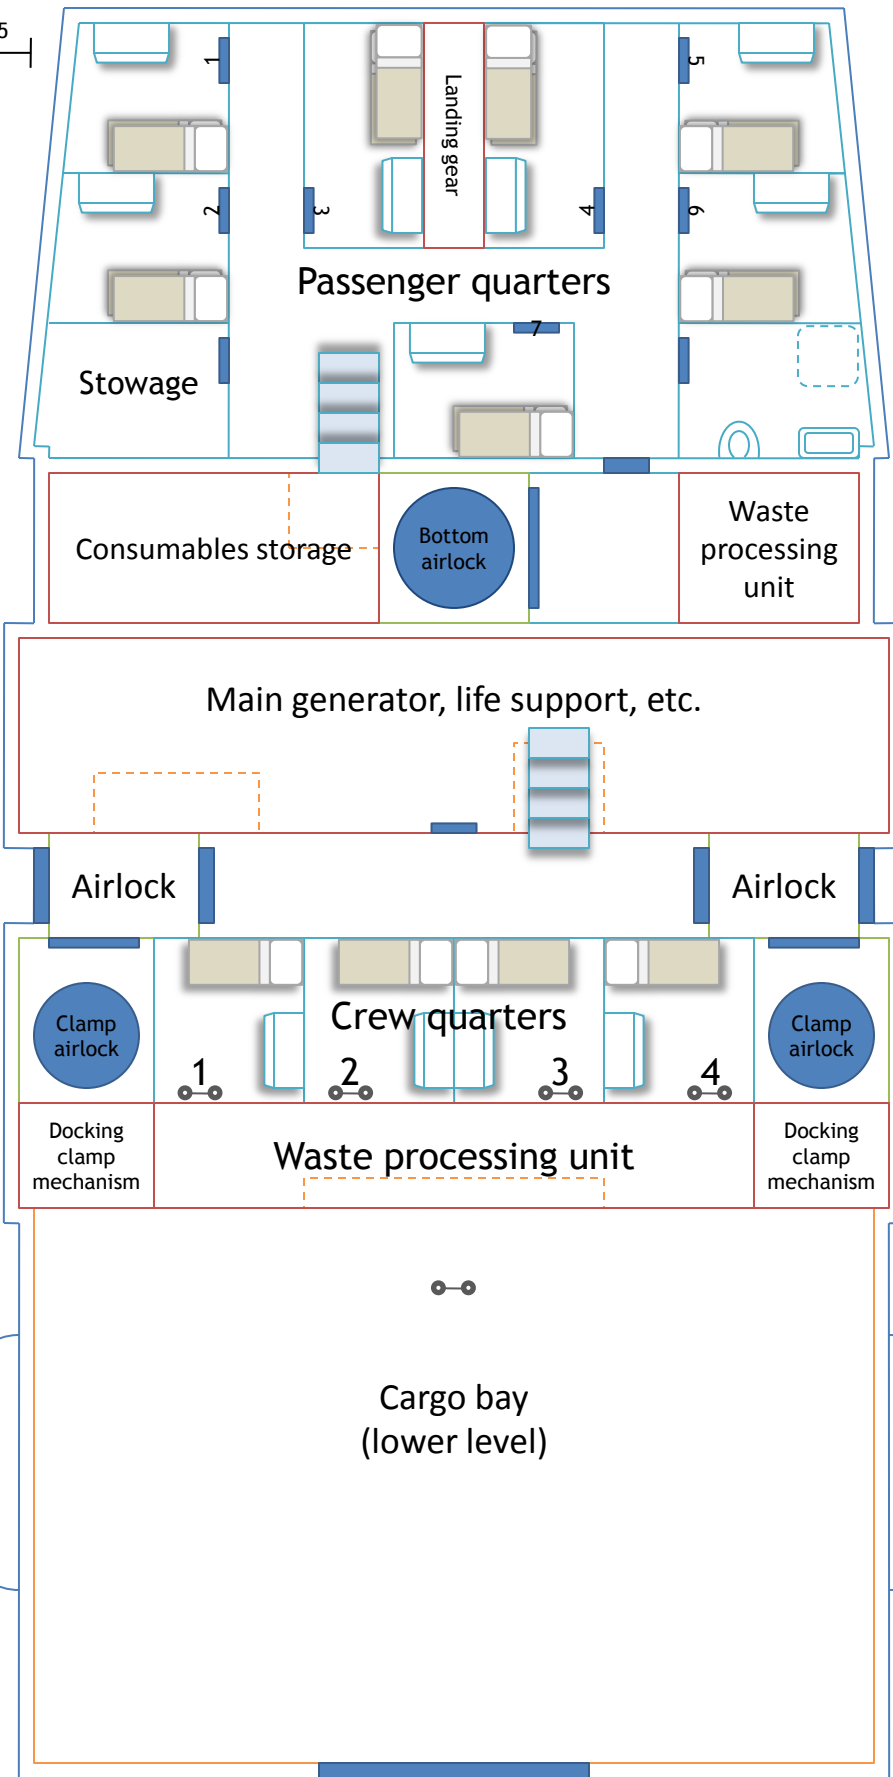

- Door
- Hatch
- Control panel
- Airlock
- Bridge
- Maintenance
- Cargo space
- Smuggling compartment
- Window
- Ladder
- Chair
- Pilot's seat
- Stairs
- Table
- Autochef
- Bed
- Toilet
- Sink
- Shower
- Personal locker
